## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a method of tuning a laser, classified in class 372, subclass 20.
- II. Claims 6-13, drawn to methods dealing with receivers in open pathcommunications systems, classified in class 398, subclass 118.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because there is not required in the combination coarse tuning means or the requirement of no fine tuning means. The subcombination has separate utility such as in any system other than a communications system where a locked wavelength is needed. Medical instrumentations fields, for example, often require locked wavelengths.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
